

Environmental Improvements

Sense Of Place

Basis of Need Stage 2 Analysis

Issues With Existing Boundaries

Areas of Opportunity

Sense of Place:

- Analysis by the masterplan team in stage 2 identified key opportunity areas to improve the identity of communities.
- Small scale improvements can make a big difference to local communities. Some of the ideas that we have presented here are in response to needs mentioned in the consultations last year.

Opportunity Areas:

- Pedestrian links increase connections through Cranmore, linking public spaces. These spaces should be overlooked to promote security.
- Active green spaces can be created by installing seating, sheltering trees and paving. Spaces that have a use, like pitches and play areas, are far more likely to be maintained and respected.
- Boundary walls should be clean and secure. Boundaries which are difficult to maintain can attract vandalism.
- Key corner buildings can become features in a neighbourhood by marking the entrance to a street.
- Stores for coal bins and shelters for the front door can add considerable variety to the street.
- Closing some of the laneways in some specific areas to improve the security of the area.

Issues With Existing Paths, Roads & Greens

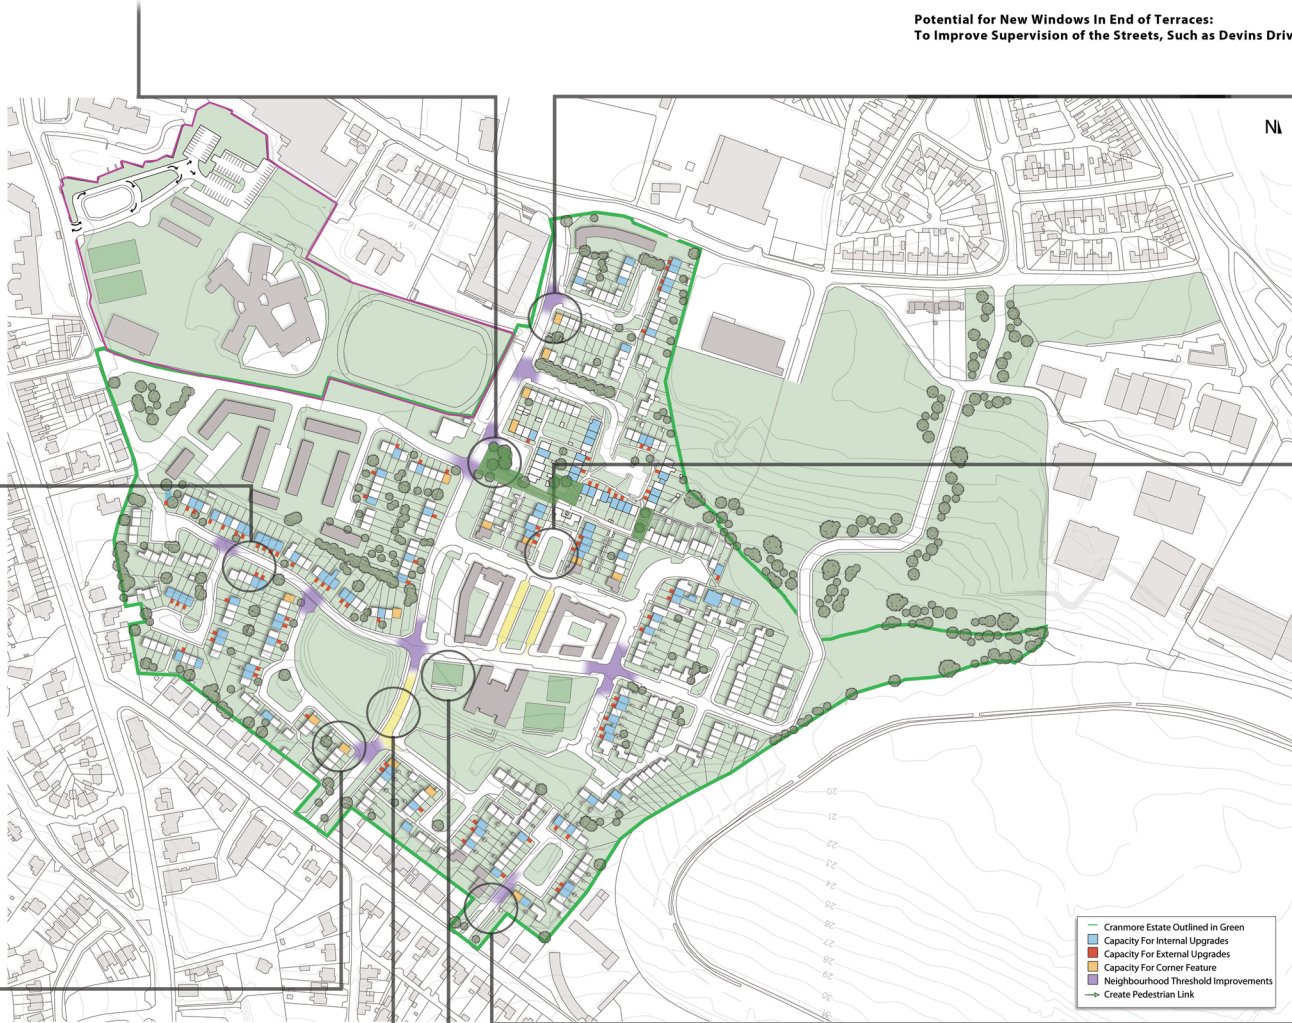

Pedestrian Green Link

Potential for New Windows In End of Terraces:
To Improve Supervision of the Streets, Such as Devins Drive

Improved Garden Walls

Areas of Possible Environmental Improvements

Successful Play Area

Corner Defined By Planting

Upgrades To Neighbourhood Entrances

Safe Surfaces

Shared Road Surface Encourages Safer Driving

Safe Areas For Children To Play

Stores & Entrances

Successful Example of Bin Store

Successful Example of Coal Store
