### Chimney fire signs

- A chimney fire produces excessive smoke.
- Burning embers may fall down the chimney.
- Flames or sparks may be visible from the top of the chimney.
- A loud roaring noise may be audible.

## A chimney fire can turn into a house fire if not dealt with!

# If a fire breaks out in your chimney or stove

- Get out.
- Call 112 or 999 without delay.
- Ask for the fire Service.
- Speak calmly and clearly.
- Give your address and phone number. If you are calling on your mobile, say what county you are in.
- Only hang up when the operator tells you to.
- Stay out.

## Chimney and Stove Fire Safety

**Comhshaol, Pobal agus Rialtas Áitiúil**Environment, Community and Local Government

#### Installation

- Installation of stoves must be done by a competent installer and in line with Technical Guidance Document J (Heat Producing Appliances) - Building Regulations.
- Sufficient space from combustible materials should be allowed around the stove and the flue.
- Ensure sufficient ventilation is provided for the stove. Never block up air vents/grilles.

#### **Maintenance**

- Have your chimney cleaned regularly
- Ensure stoves, boilers and flues are serviced regularly by a competent engineer.

#### Usage

- ✓ Do not use flammable liquids to start a fire.
- Never burn household waste.
- ✓ Use only the recommended fuel for your stove. Creosote is a combustible, tarry by-product of burning wood or fossil fuels which can clog up chimneys and flues and cause fires using seasoned wood reduces creosote build-up.
- ✓ Use a spark guard to prevent sparks from open fires falling onto the floor.
- ✓ Dispose of ashes before setting new fires by shovelling into a metal bucket with a metal lid. This should be placed outside away from buildings. Ashes and embers can stay hot for days and ignite combustibles.

#### **Alarms**

- A carbon monoxide alarm should be installed in all homes with fuel-burning appliances, including open fires. Install one in every room containing a stove or open fire.
- Remember these are no substitute for regular inspection and maintenance of stoves, vents, flues and chimneys.
- Smoke alarms should be fitted in every room (except the bathroom and garage) to fully protect your home. Fit a heat alarm in the kitchen.
- It is essential that smoke alarms are fitted in the hall and landing of every home.
- Ensure that alarms can be heard in bedrooms.
- Test alarms regularly.
